

## [DocV1.VisitedPagesPortlet](#)

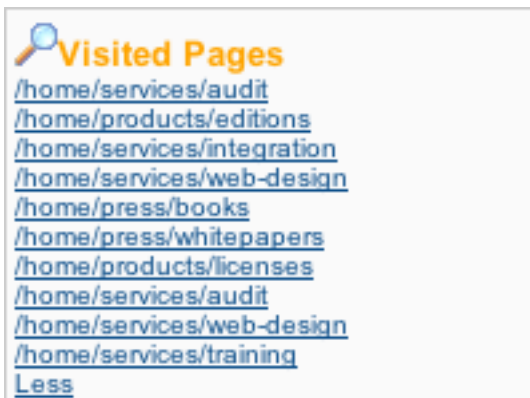

### Visited Pages Portlet

This portlet displays the last pages the user browsed.

By default 6 pages are seen but the global navigation can be seen when the user click on the "More" link.

A click on anyother paths will redirect the user to the page he already visited.

If the user makes an action in any of the portal template such as changing the default locale then a "N/A" text will be displayed in the visited pages portlet as shown in the next screen:
