

## [DocV1.VerticalMenu](#)

### Menu portlet

The menu portlet is used to visualize the navigation tree. Only the current node path is visible though.

The administration section is visible when the user logs in. It renders several links to reach the edit modes like :

- Edit Portal Mode
- Edit Navigation Mode
- Edit Page Mode

This portlet is not used in our default mobile layout as administration tasks are

not to be done within a mobile device. Also mobile devices layouts are composed of a single column.
