

Plugin ExtractAttachment

Jérémie Defaye

The plugin ExtractAttachment makes possible to fill the lack of the plugin Mantis which is not able to insert the documents of the campaigns in the mantis bug report. This plugin is temporary, waiting for the incorporation of MantisConnect 1.1 which should correct this gap (see [RoadMap de MantisConnect](#)).

Moreover, this plugin is able all the attachements from SaloméTMF to store them in a single reference (File server, ftp server) so that these documents are accessible without returning in the application.

Access to functionalities of the plugin of Attachments extraction is made via the button “Tools”, present in the first three windows of Salome: “Tests Management”, “Campaign Management” and “Data Management”.

- The « Etration of attachments » menu directly proposes to extract the attachments of the application.

This plugin is strongly dependant of « Mantis » plugin.
