Chapter 1. Overview

This document describes the process console capabilities for the Bonita Workflow. Although these activities may be performed by a single individual, the Process Console provides those capabilities to users in a role based basis. BPM User and Operator roles will be leveraged in this guide.

The information in this document is organized as follows:

Process Console Description

Refer to Chapter 2.

FOR THE USER

- Accessing and Creating Processes
Refer to Chapter 3.
- Accessing and Managing To Do / Done Tasks
Refer to Chapter 4.

FOR THE OPERATOR

- Managing Process Models
Refer to Chapter 5.
- Managing Instances
Refer to Chapter 6.
- Managing Activities
Refer to Chapter 7.

1.1 Role of User

This guide provides the User with the information necessary to be able to :

- Start Workflow Processes
- Perform / Suspend / Resume Tasks

1.2 Role of Operator

This guide provides the Operator with the information necessary to be able to :

- Deploy / Undeploy / Start Bonita process models
- Access Bonita process model instance informations
- Delete Instance
- Edit Process Instance Variables
- Access Bonita Activities informations
- Perform / Suspend / Resume Activity in a specific instance
- Consult / Edit Activity Variables
- Consult Activity's Properties

Chapter 2. Installation

2.1 Prerequisite

The Nova Bonita Console works with java 1.5. Be sure that your default JRE is 1.5

2.2 Installation procedure

-Get the last version of the Nova Bonita Console from this web page :

http://forge.objectweb.org/project/showfiles.php?group_id=56

- Extract it and go in the **bonita-console-4.0.1/bin** directory

- If your use Linux as Operating system do the following::

```
> chmod +x bonita-console-4.0.1/bin/*.sh
```

```
> unset CATALINA_HOME CATALINA_BASE
```

Chapter 3. Quick Start

In this chapter we present a quick start documentation for the Nova Bonita Console. In the next chapters we will explain in more details the functionalities available in this release

3.1 Console Start

- Open a command line and execute the following under the **bonita-console-2.0/bin** directory:

- For Linux : `./bpm.sh run`
- For Windows : `bpm run`

- In your web browser connect to the following URL : <http://localhost:8080/portal/>

Connect with :

- User Name : **root**
- Password : **bpm**

figure 1: Login screen

3.2 Deploy process

Open the **Bonita Management** application available in the doc bar.

A couple of BPM examples to deploy are available under **Bonita-console-4.0.1/examples/**.

Choose a process to deploy and click on

figure 3: Choose a process to deploy

figure 2: Process Deployed

3.3 Start Process

To start your first process click on the button

Fill the displayed form and click on the submit button.

So a new instance is created. And the updated instances list is displayed.

figure 4: Start Process Form

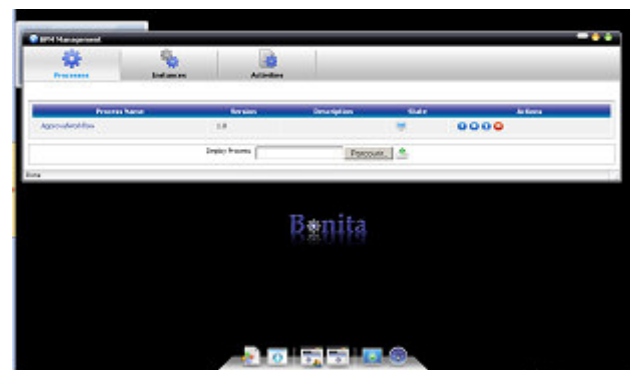

figure 5: The created instance

Chapter 4. Process Console Description

4.1 Console Access

To access the Process Nova Bonita Console, connect to the following URL :

`http://your_host:your_HttpPort/portal/`

(by default : <http://localhost:8080/portal/>)

figure 6: Console login screen

4.2 Default users

The Nova Bonita Console has three default users types:

root :

This user has the rights to manage the console look and feel, he can also manage :

- The navigations and pages of the console
- The languages setting
- The users, groups and memberships
- The registry of all the Nova Bonita Console applications

Finally, this user has by default the two profiles User and Operator, so he access to all the associated applications.

admin :

This user has the Operator profile so he access to the functionalities described in Chapter 1.2

james, john and jack:

These users have the User profile so they access to the functionalities described in Chapter 1.1

4.3 Console frames description

After logging in, the Nova Bonita Console is available in the main frame, of your browser

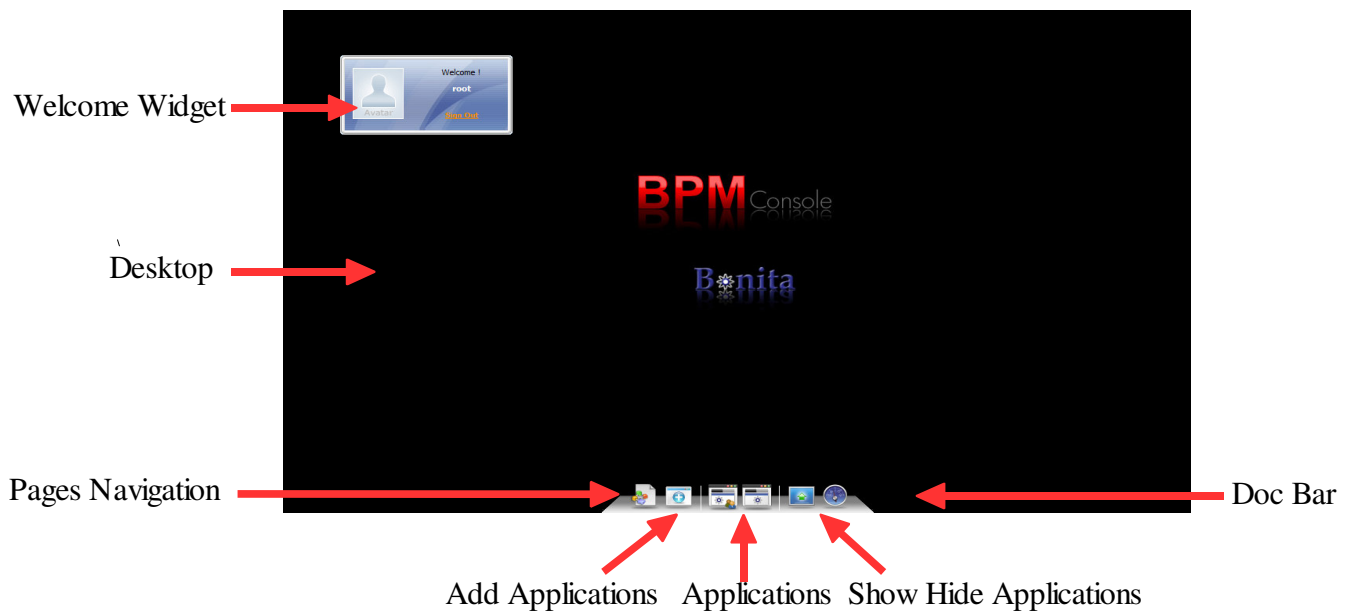

figure 7: Console Description

Desktop :

The Desktop is the workspace in which BPM and others applications (aka portlets) can be added, removed, configured... like in an OS

Doc Bar :

The Doc Bar is used to access to the available applications for a particular user type

Applications :

The Application allow to perform the business functionalities like the process management ...etc. Each application is independent from the others. It looks like a simple window.

Pages Navigation Button :

This button allow to display the list of the Console navigations and to navigate between the different pages.

Add Applications Button :

This button allow to add an application/widget in the Doc Bar/Desktop.

Show / Hide Applications :

This button allow to hide all the Applications / Widgets displayed on the desktop. A second click allow to display them again.

Welcome Widget :

The welcome widget display the logged user's name and allow to logout from the Nova Bonita Console.

4.4 Application's graphical organization description

Each Application is organized like this :

- **Main Tools** : The main banner that allow to access the main tools.
- **Tabulations** : A set of tabulation for the tools in use. A lot of tabulations can be opened at the same time.
- **Work Area** : The tools display area.

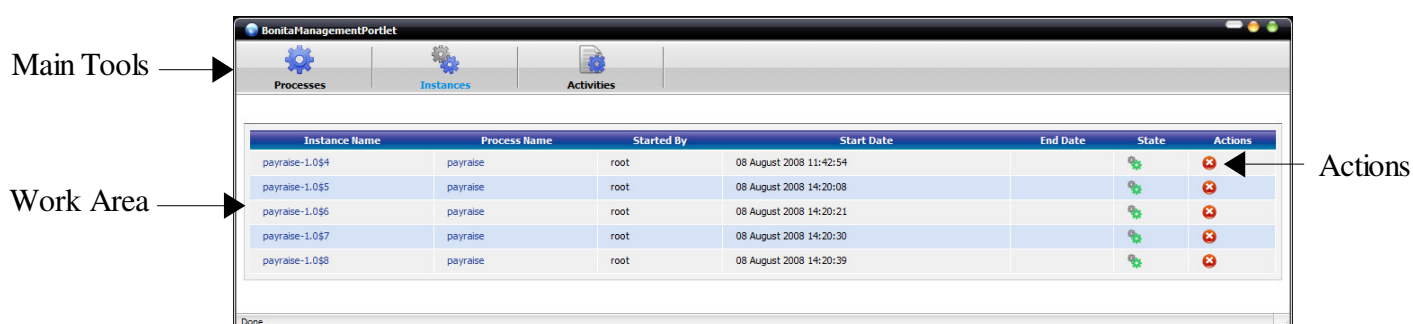

figure 8: Application Description (1/3)

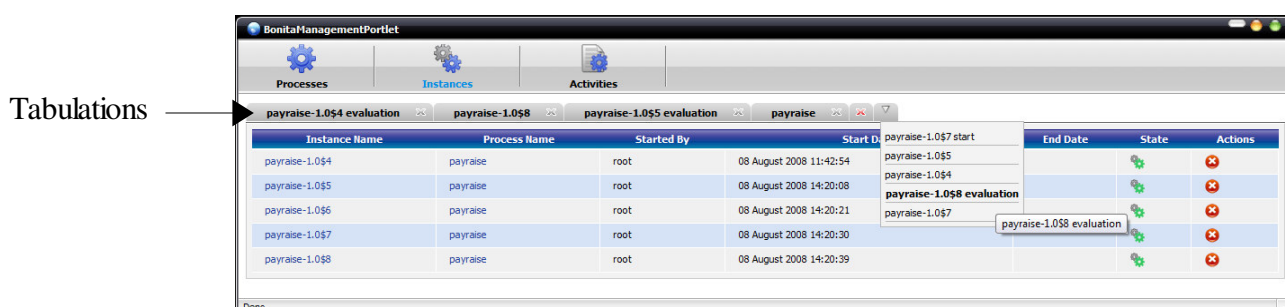

figure 9: Application Description (2/3)

Tool-Tabulations

Id	Type	Activity Name	Started By	Start Date	End Date	State	Actions
evaluation	TASK	payraise-1.0\$5					
start	AUTOMATIC	payraise-1.0\$5	SYSTEM	08 August 2008 14:20:08	08 August 2008 14:20:08		

figure 10: Application Description (3/3)

Chapter 5. Accessing and Creating Processes

5.1 Access the Workflow Process List

Select the application **Users WorkList** in the **Doc Bar**, then select the "To Do List"

tabulation  in the **Main Tools** to display the list of all the remaining tasks to be performed and all the accessible processes that can be launched.

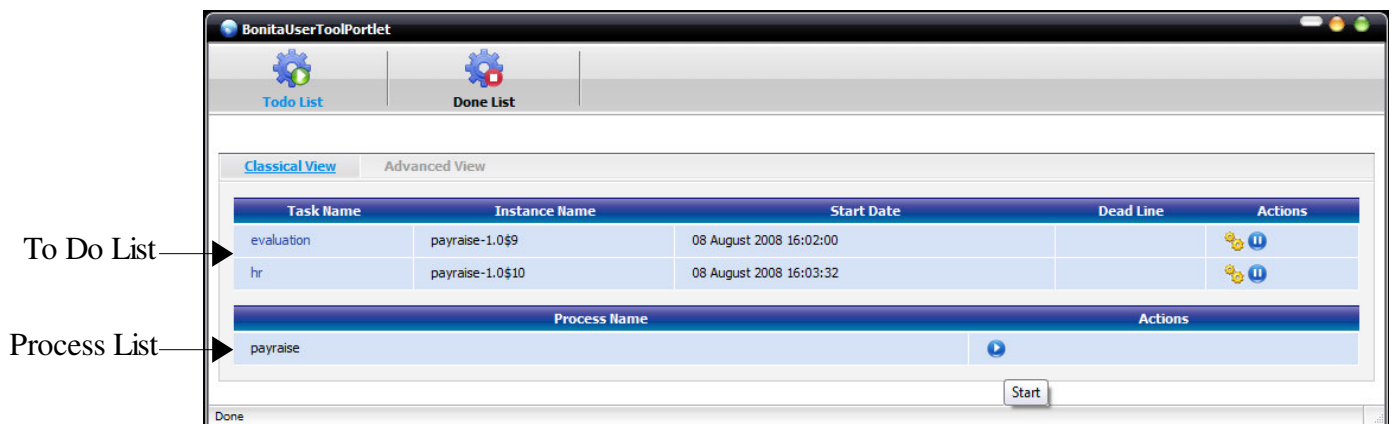

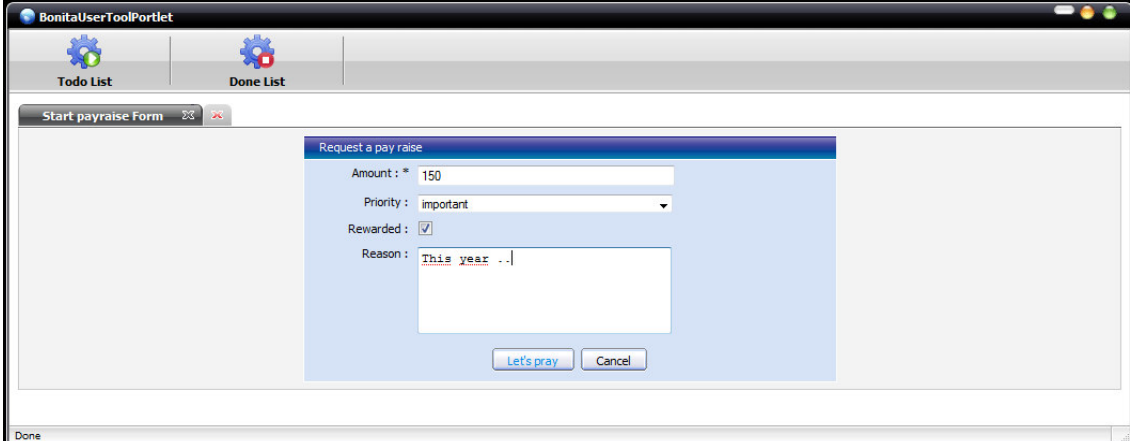

figure 11: Access Workflow Process List

5.2 Create a new Instance of a Bonita Process

- Access the workflow process list (see section 4.1).
- To create a new instance of the process, click on the Start button. 
- If the start of the process is manual, a form is displayed.
- Fill in the form and click on the submit button as shown in the example below.

Start payraise Form

Request a pay raise

Amount : * 150

Priority : important

Rewarded : ☒

Reason : This year

Let's pray Cancel

figure 12: Creation of a new instance form example

Chapter 6. Access To Do / Done Tasks

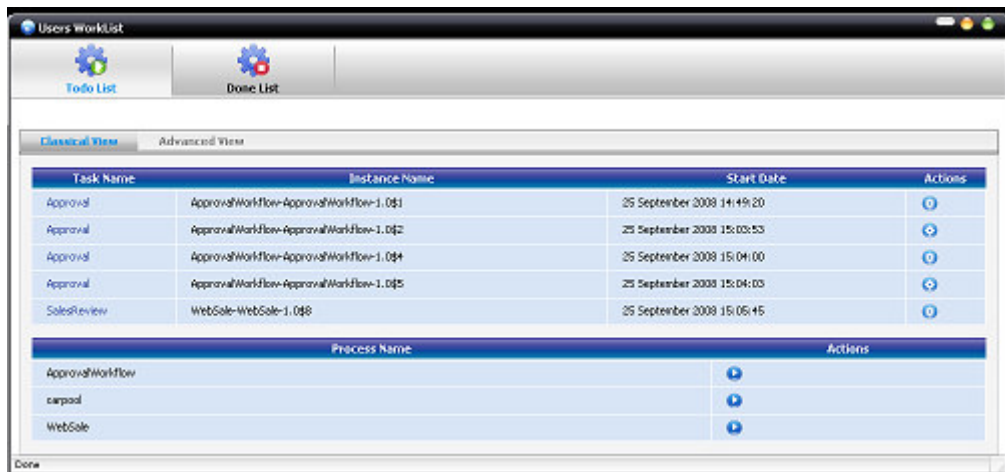

6.1 Consult the To Do Tasks List

- Select the application **User Worklist** in the **Doc Bar**, then select the "ToDo List"

tabulation  in the **Main Tools** to display the list of all the To Do tasks remaining to be performed.

- Two different views are possible for the To Do list :

Classical view : This view display the To Do tasks list in a simple grid mode.

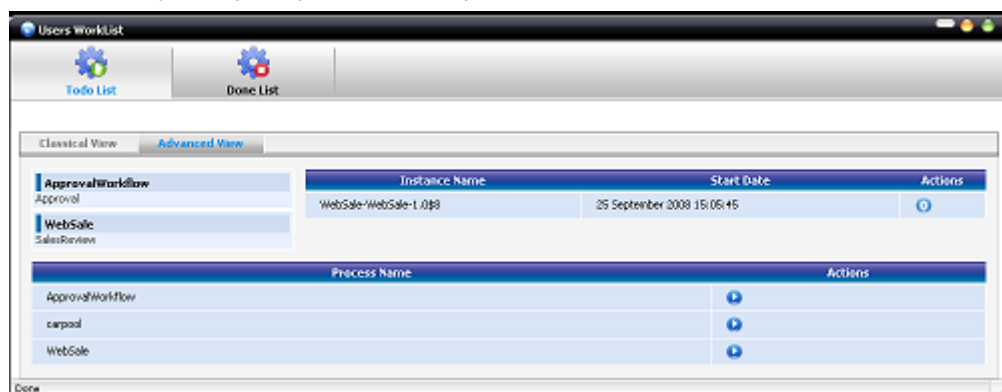

The screenshot shows the 'Users Worklist' application window. At the top, there are two tabs: 'ToDo List' (selected) and 'Done List'. Below the tabs, there are two view options: 'Classical View' (selected) and 'Advanced View'. The main area displays a table with the following data:

Task Name	Instance Name	Start Date	Actions
Approval	ApprovalWorkflow-ApprovalWorkflow-1.0\$1	25 September 2008 14:49:20	
Approval	ApprovalWorkflow-ApprovalWorkflow-1.0\$2	25 September 2008 15:03:53	
Approval	ApprovalWorkflow-ApprovalWorkflow-1.0\$4	25 September 2008 15:04:00	
Approval	ApprovalWorkflow-ApprovalWorkflow-1.0\$5	25 September 2008 15:04:03	
SalesReview	WebSale-WebSale-1.0\$8	25 September 2008 15:05:45	

Process Name	Actions
ApprovalWorkflow	
carpool	
WebSale	

figure 13: Classical view of the To Do List

Advanced view : This view display the users tasks list sorted by process and activity names. Once clicking in each activity name the application will list the available activities instances corresponding to a particular activity name.

The screenshot shows the 'Users Worklist' application window with the 'Advanced View' selected. On the left, there is a sidebar with a tree view showing 'ApprovalWorkflow' (with sub-items 'Approval' and 'WebSale') and 'SalesReview'. The main area displays a table with the following data:

Instance Name	Start Date	Actions
WebSale-WebSale-1.0\$8	25 September 2008 15:05:45	

Process Name	Actions
ApprovalWorkflow	
carpool	
WebSale	

figure 14: Advanced view for the To Do List

- The following parameters are displayed for each task :

- **Task name** : The task name
- **Instance name** : The associated instance name
- **Start Date** : The start date of the task

- A detailed view of a task is available by clicking on the name of the task.

A description text can be displayed if exist.

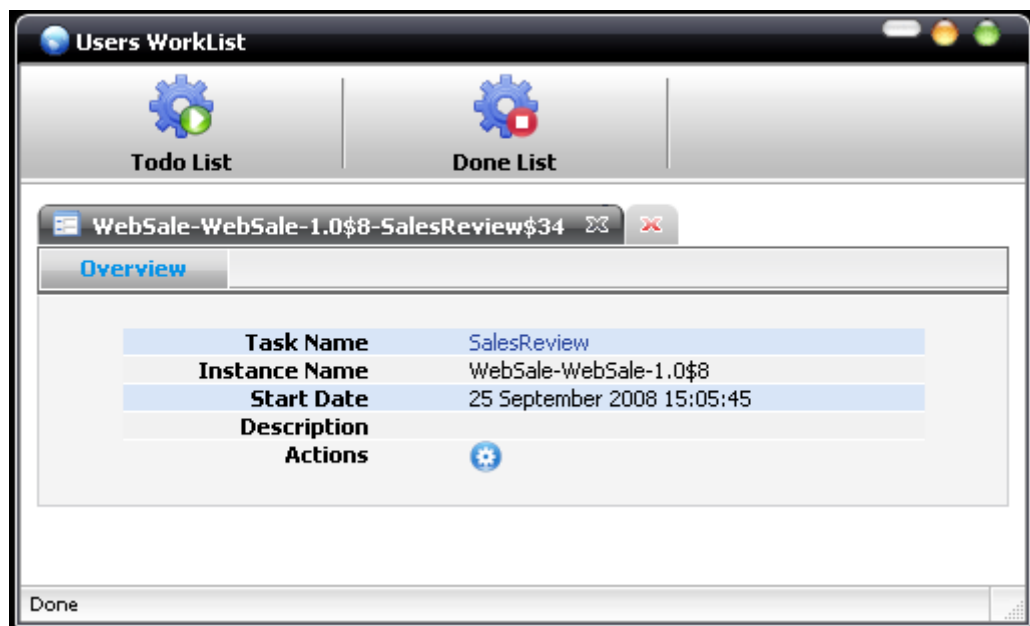

figure 15: Detailed view of Task

6.2 Perform / Pause / Resume a Task

6.2.1 Perform

- Go to the To Do tasks list (see section 5.1).
- To perform a task, click on the  button (perform) in the Actions field of the line corresponding to the task you want to perform (as shown above on the example).
- If this task has properties to be set or read by the user, a form is displayed.
- Fill in the form, then click on the "submit" button as illustrated below.

The screenshot shows a window titled "Users WorkList" with two tabs: "Todo List" (active) and "Done List". Below the tabs is a task entry for "WebSale-WebSale-1.0\$8-SalesReview\$34" with a "Form" icon. The form is titled "SalesReview" and contains the following fields:

- Email_Address:
- Phone_Number:
- User_Name:
- decision:
- Products:

At the bottom of the form are "submit" and "Cancel" buttons. The window has a "Done" button at the bottom left.

figure 16: Perform a task

6.2.2 Suspend

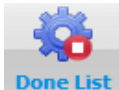

- Go to the To Do tasks list (see section 5.1).
- To suspend a task, click on the  button at the end of the line of the task you want to suspend.

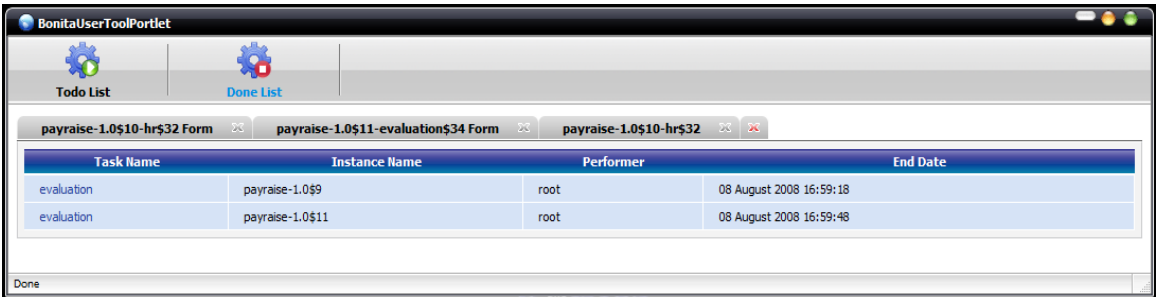

6.2.3 Resume

- Access the To Do tasks list (see section 5.1).
- To resume a suspended task, click on the  button at the end of the line of the task you want to resume (as shown above on the example). Only suspended tasks can be resumed !.

6.3 Consult the Done Tasks List

Select the application **Users WorkList** in the **Doc Bar**, then select the "Done List"

tabulation  in the **Main Tools** to display the list tasks that has already been executed.

The screenshot shows the BonitaUserToolPortlet interface. At the top, there are two tabs: 'Todo List' and 'Done List', with 'Done List' being the active tab. Below the tabs, there are three form instances: 'payraise-1.0\$10-hr\$32 Form', 'payraise-1.0\$11-evaluation\$34 Form', and 'payraise-1.0\$10-hr\$32'. The main area displays a table with the following data:

Task Name	Instance Name	Performer	End Date
evaluation	payraise-1.0\$9	root	08 August 2008 16:59:18
evaluation	payraise-1.0\$11	root	08 August 2008 16:59:48

At the bottom left of the interface, the word 'Done' is visible.

figure 17: The Done Tasks List

Chapter 7. Managing Process Models

Those features are only accessible by Operators users.

7.1 Access the Process Model List

- Select the application **BPM Management** in the **Doc Bar**, then select the

Processes tabulation  in the **Main Tools** to display the list of all the accessible processes.

- The following parameters are displayed for each process model line :

- **Process name** : The name of the process
- **Version** : The version number of the process
- **Description** : Some description about the process

- The following actions are possible for each process model :

-  starting the process
-  removing all the running instances of this process model
-  deleting a process
-  undeploying a process

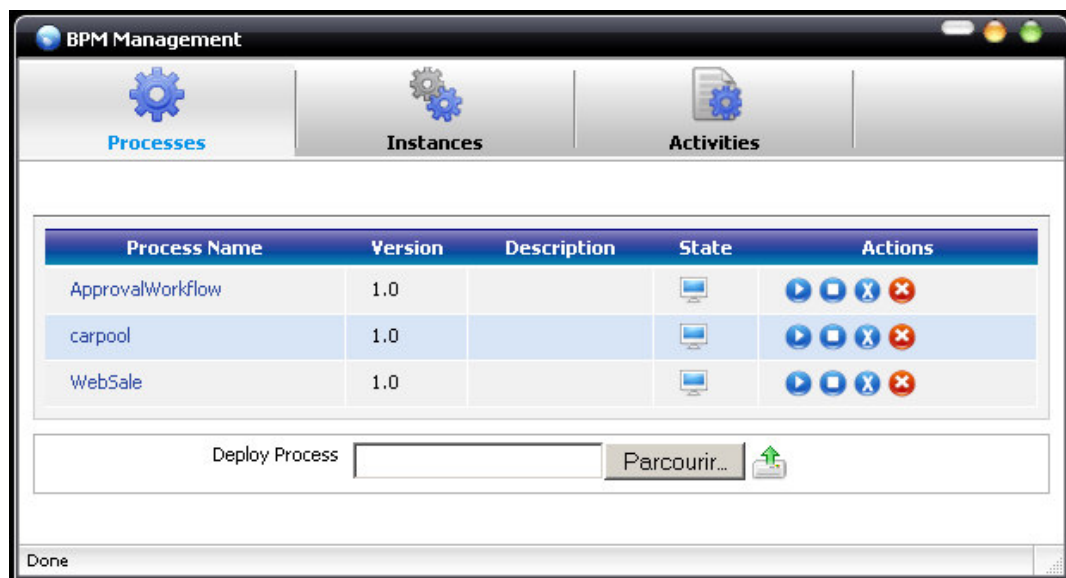

figure 18: Process Model List

-A detailed view of a process model is available by clicking on the name of the process.

figure 19: Detailed view of a process model

-Associated instances of the process model displayed in the detailed view are available by clicking on "Instances" sub-tabulation.

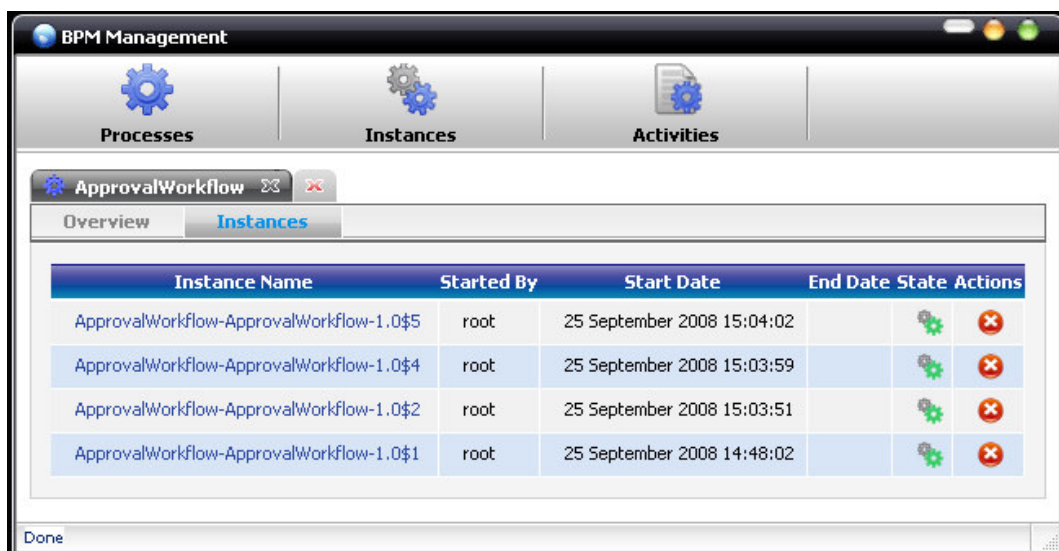

figure 20: Consult the instances list for a given process

7.2 Deploy / Undeploy / Delete Processes Models

Go to the process models list (see section 6.1).

Deploy :

To deploy a process model, click on the browse button and select the path to access your process model, then click on the button  (upload) .

After deploying operation, the process models list is refreshed with the new imported process model.

Note : You may deploy a single class file or a library jar file with this fonctionnality

Undeploy :

To undeploy a process model, click on the  button for the process you want to undeploy. You can also open the detailed view of the process model, then click on the undeploy button in the Actions field.

Note that the undeploying action will keep all historic data in your system.

Delete :

To delete a process model, click on  button at the end line of the process you want to delete. You can also open the detailed view of a process model, then click on the delete button in the Actions field.

7.3 Start Process Models

Access the workflow process list (see section 6.1).

To create a new instance of the process, click on the  button (Start button).

If the start of the process is manual, a form is displayed.

7.4 Remove all Instances of a Process Model

Access the workflow process list (see section 6.1).

To remove all the instances of a process, click on the button 

Chapter 8. Managing Instances

8.1 Access the Process Instances List

Select the application **Bonita Management** in the **Doc Bar**, then select the

Instances tabulation  in the **Main Tools** to display the list of all the running instances.

The following parameters are displayed for each process instance :

- **Instance name** : The name of the instance (click to display the detailed view of the instance)
- **Process name** : The name of the associated process model (click to display the detailed view of the process)
- **Started By** : The name of the user that started the instance
- **Start Date** : The date in which the instance was started
- **End Date** : The finish date of the instance
- **State** : The state of the instance

In the following table we present the different states of instances.

State	Meaning
	Started : The instance is in started state
	Finished : The instance is in the finished state
	Initial : The instance is in the initial state

The following actions are possible for each process instance line :

-  Delete the instance

- It is possible to consult a detailed view of a process instance by clicking on the name of the instance.

figure 21: Detailed View of an Instance

8.2 Consult / Edit the variables of an instance

- Access the instances list (see section 7.1).
- Click on the instance name to display the detailed view of the instance.
- Click on the "Variables" sub-tabulation to display all the associated variables of the instance. You can also EDIT those variables by clicking on the button and filling the new value in the variable edition popup.

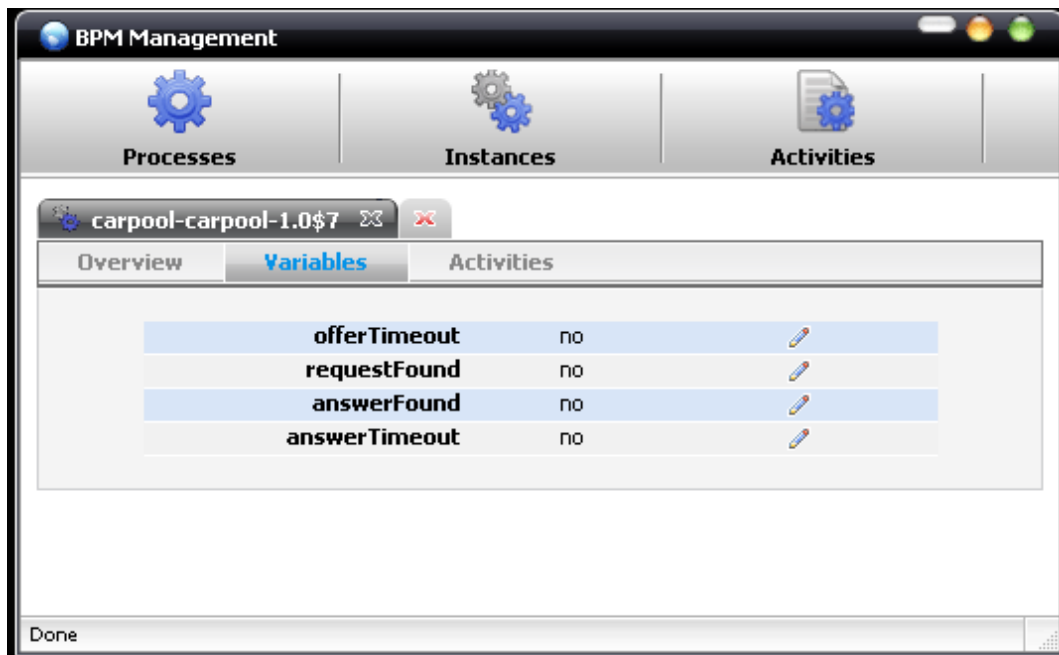

figure 22: Consult the variables of an instance

8.3 Access the activities list of an instance

- Go to the instances list (see section 7.1).
- Click on the instance name to display the detailed view of the instance.
- Click on the "Activities" sub-tabulation to display all the associated activities of the instance.

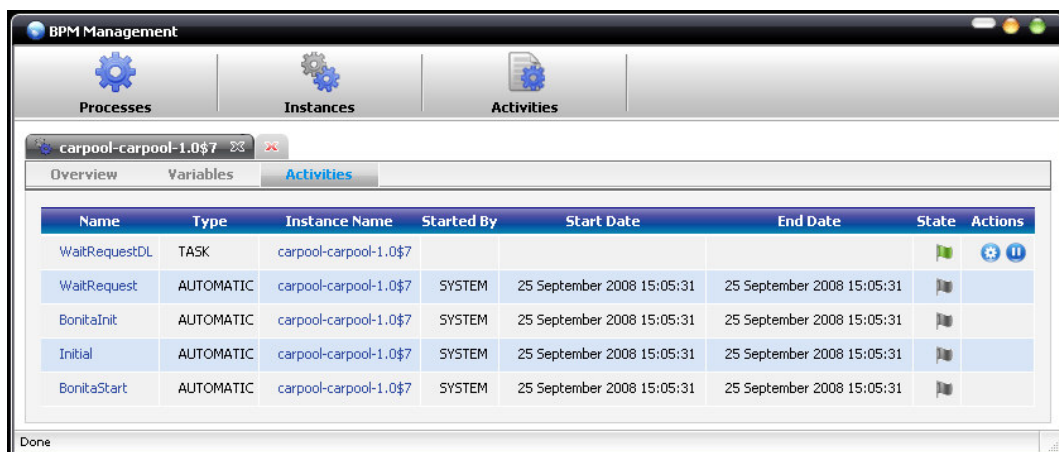

figure 23: Consult Activities of a given instance

Chapter 9. Managing Activities

9.1 Access the Activities List

Select the application **Bonita Management** in the **Doc Bar**, then select the Activities

tabulation  in the **Main Tabulation** to display the list of all the Activities.

The following parameters are displayed for each activity line :

- **Id** : The id of the activity (click to display the detailed view of the activity)
- **Type** : The type of the activity
 - **AUTOMATIC** : Automatic execution of the activity
 - **TASK** : manual activity that requires human interaction
 - **SUBFLOW** : subprocess activity that creates a subprocess
- **Instance name** : The name of the instance that triggered the activity (click on to display the detailed view of the instance)
- **Started By** : The name of the user that started the activity
- **Start Date** : The lunch date of the activity
- **End Date** : The finish date of the activity
- **State** : The state of the activity

In the following table you will find the different states of the activities.

State	Meaning
	Ready : The activity is ready to be started
	Initial : The activity is in the initial state
	Executing : The activity is in execution
	Finished : The activity has already been finished
	Suspended : The activity has been suspended

- A detailed view of an activity is available by clicking on the name of the activity.

figure 24: Detailed view of an activity

9.2 Start an Activity

- Go to the activities list (see section 8.1).
- To perform an activity, click on the button in the Actions field of the line corresponding to the activity you want to start (as shown above on the example).
- If this activity has properties to be set or read by the user, a form is displayed.
- Fill in the form, then click on the "submit" button.

9.3 Suspend an Activity

- Access the activities list (see section 8.1).
- To suspend an activity, click on the button at the end of the line of the activity you want to suspend (as shown above on the example).

9.4 Resume an Activity

- Access the activities list (see section 8.1).
- To resume a suspended activity , click again on the  button at the end of the line of the activity you want to resume.

9.5 Access the Variables List of an Activity

- Access the activities list (see section 8.1).
- Click on the instance name to display the detailed view of the activity.
- Click on the "Variables" sub-tabulation to display all the associated variables of the activity.

figure 25: Access the variables of an activity

Chapter 10. Managing users, groups and memberships

Those functionalities can be done only by the **root** user.

This user is allowed to view the left side workspace bar that gives access to administration features of the Console.

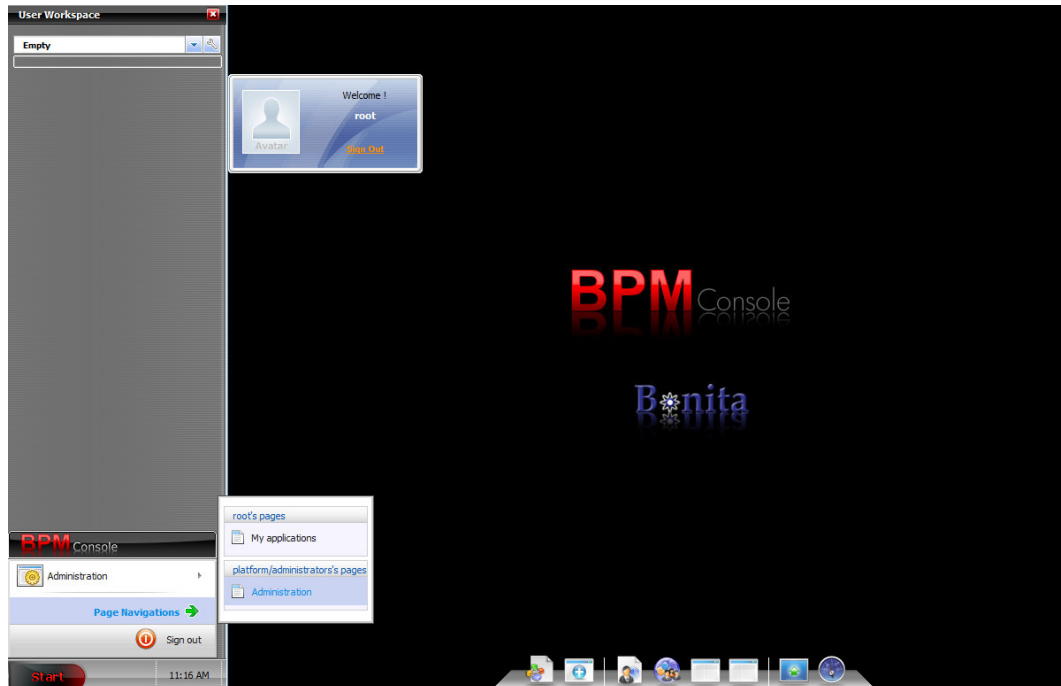

figure 26: Access Administration page

10.1 Add a new user to the Nova Bonita Console

Then open the "New Account" application, and fill the form with the informations of the new user and finally click on "Save " button to validate.

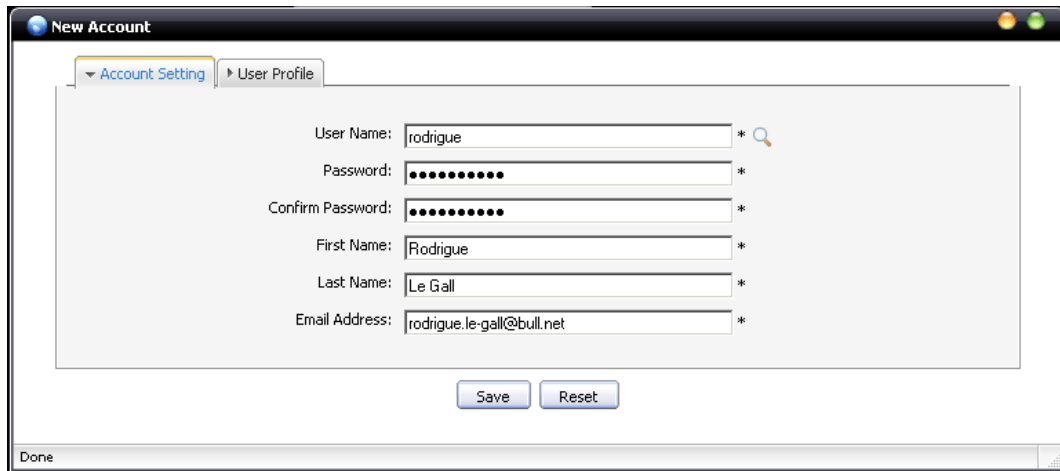

figure 27: Add new user to the Nova Bonita Console

10.2 Set roles/permission of a user to access to the console

- Go to the Administration page with the "**Pages Navigation**"  button or the root navigation as shown in the figure 36.
- Then open the "**Community Management**" application.
- Click on "**Group Management**" tabulation.
- Select the group **Platform > Console > Bonita**
- After that just add the user you want to give access to the console with at least the membership "**user**". And repeat the operation if you want that user has the role "**operator**".

Example : Setting the user "rodrique" as operator of the console means that we need to put it in the group Bonita with 2 memberships : user and operator.

Step 1 : Select the right group

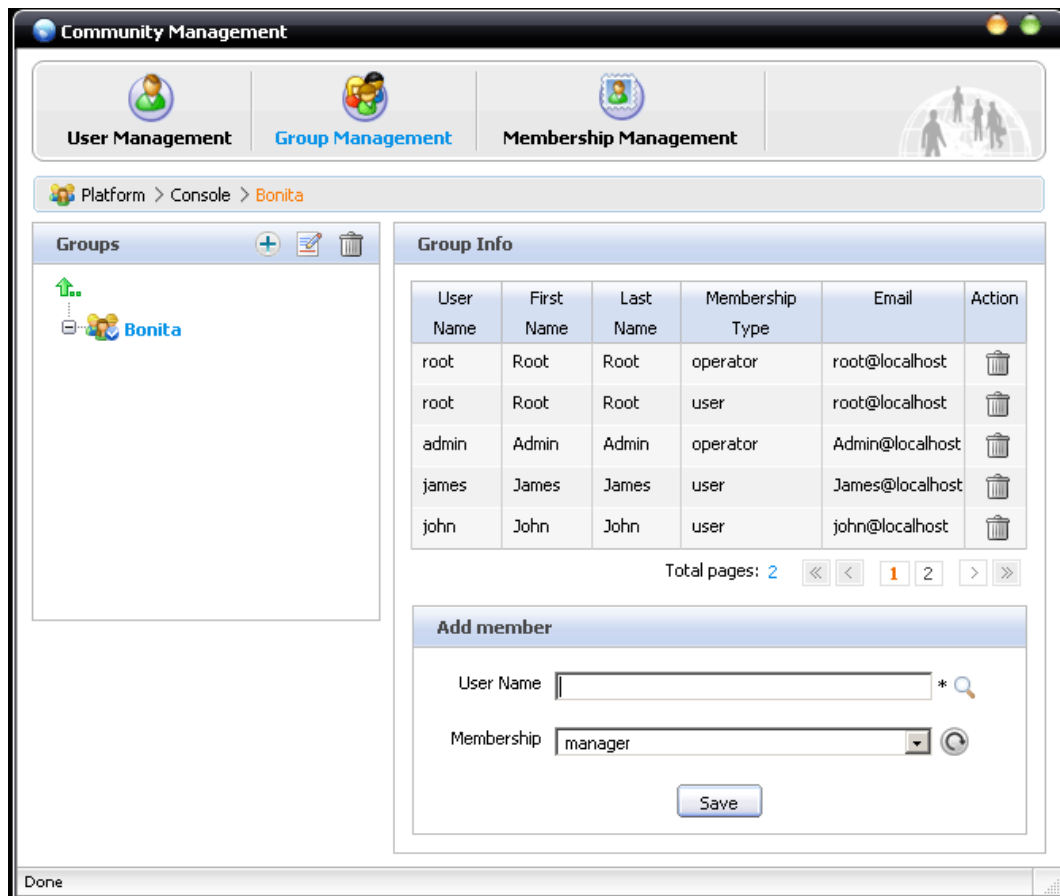

figure 28: Select the Bonita group

Step 2: fill the Add member form with user name rodrigue and Membership user and click on Save

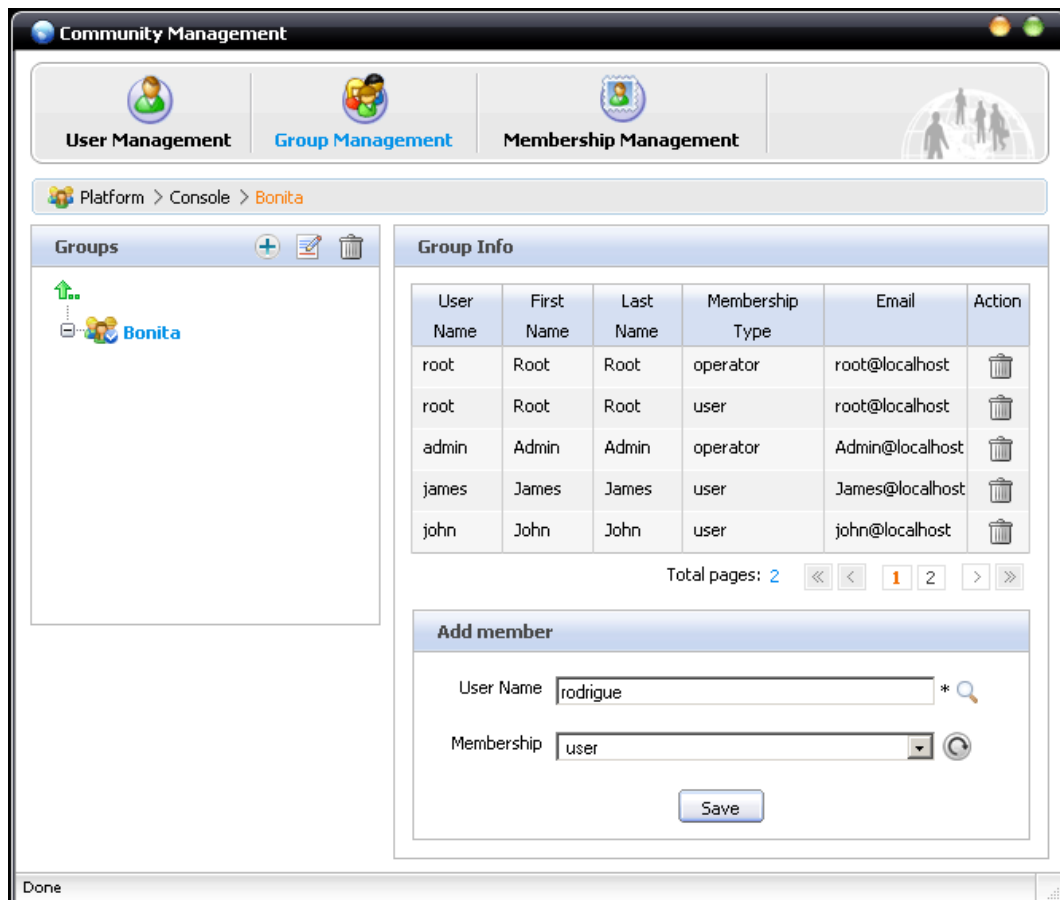

figure 29: fill the Add member form to add as user

Step 3 : fill the Add member form with user name rodrigue and Membership operator and click on Save

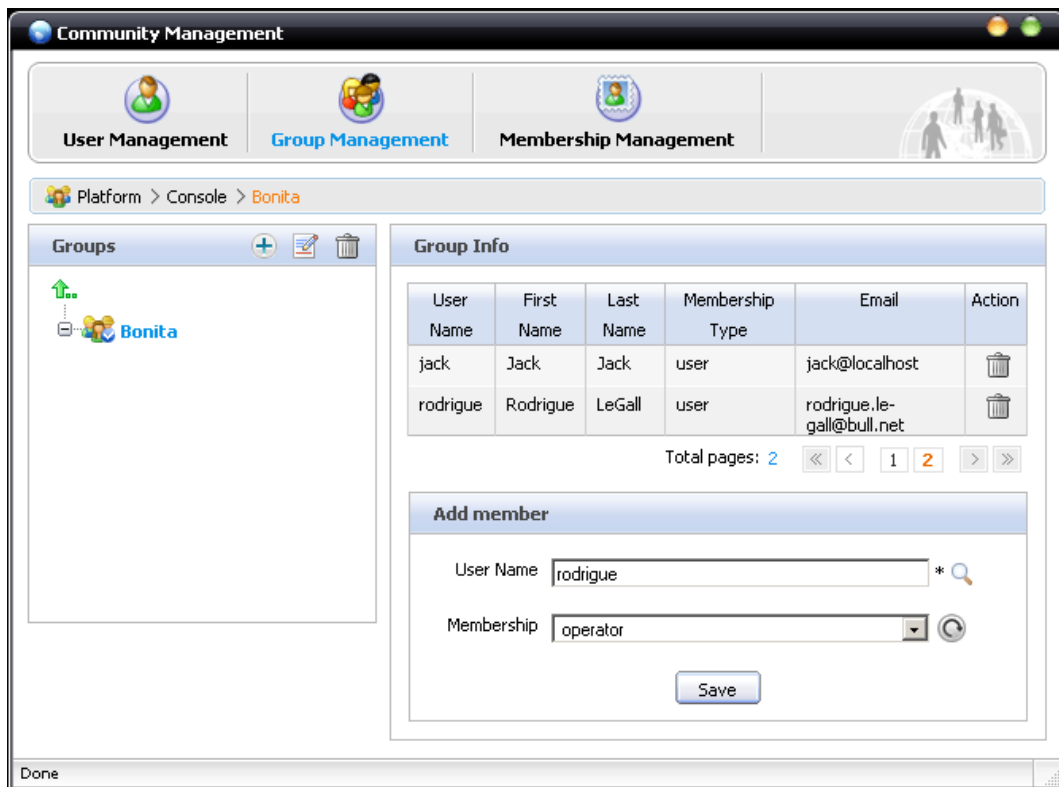

figure 30: fill the Add member form to add as operator

The user is now an operator of the Nova Bonita Console.

Chapter 11. Forms customization

11.1 Overview

The Bonita console is built with an automated form generator. This functionality is useful during the conception and testing phases of your processes. The major inconvenient of the automated form generation is that generated forms are not user friendly. In order to solve this problem, the form generator is customizable via few configuration files.

To customize the forms of a Bpm process, you just need to write a description file named **forms.xml** . Each web form can be internationalized by means of a properties files. All those files must be located in the root directory of the bar (Business Archive) file of your process.

This chapter will explain how to write **forms.xml** file and the internationalized property files.

11.2 Forms.xml syntax

11.2.1 Overview

The forms.xml syntax is based on an xml syntax initially derived from the xFormsyntax.

The form generator suppose that you have only one form by manual activity in your process.

Here is the abstract of all tags you need to know to customize your forms

```
<forms>
  <form>
    <activity/>
    <resource-bundle/>
    <customized-view/>
    <variable>
      <validator>
        <property/>
      </validator>
    </variable>
    <submitbutton/>
    <message/>
  </form>
</forms>
```

11.2.2 Tag list

11.2.2.1 <forms/>

Description : top level tag of the forms description.

Mandatory : true

Properties : none

Childs : <form/>

11.2.2.2

<form/>

Description : include the description of a specific activity form

Mandatory : true

Properties : none

Childs : <activity/>, <resource-bundle/>, <customized-view/>, <variable/>, <message/>

11.2.2.3

<activity/>

Description : include the id of the activity in your process model. If you want to write a form to start a process, you need to enter an empty value.

Mandatory : true

Properties : none

Childs : none

Examples :

Write a form for the activity "validation" of your process:

```
<forms>
  <form>
    <activity>validation</activity>
    ...
  </form>
  ....
</forms>
```

Write a form to start your process :

```
<forms>
  <form>
    <activity></activity>
    ...
  </form>
  ....
</forms>
```

11.2.2.4

<resource-bundle/>

Description : the resource bundle includes the translation of each variable names into human friendly language. The value refere to a .properties file : <resource-bundle>.properties

Mandatory : false

Properties : none

Childs : none

Examples :

Write a form for the activity "validation" that will use the following files for translation in english, french and spanish : validation.i18n.properties , validation.i18n_en.properties, validation.i18n_fr.properties, validation.i18n_es.properties

```
<forms>
  <form>
    <activity>validation</activity>
    <resource-bundle>validation.i18n</resource-
bundle>
    ...
  </form>
  ....
</forms>
```

11.2.2.5

<customized-view/>

Description : specify the local path of a template file that will be used for the facing of your form. This template have to be written in groovy.

Mandatory : false

Properties : none

Childs : none

11.2.2.6

<submitbutton/>

Description : define a custom submit button that will set the variable of the process or activity.

Mandatory : false

Properties :

- name

Description : the name of the button. This is also the value that will be put in the variable target

Mandatory : true

Possible values : none

Default value : none

- variable

Description : the variable of the process or activity that will be modify after the submit with the name value.

Mandatory : true

Possible values : none

Default value : none

Childs : none

11.2.2.7

<variable/>

Description : define a variable of the process that will be used in the form.

Mandatory : false

Properties :

- name

Description : the id of the variable in the process

Mandatory : true

Possible values : none

Default value : none

Example :

Write a form for an activity "validation" that use a variable "comment".

```
<forms>
  <form>
    <activity>validation</activity>
    <variable name="comment"/>
  </form>
  ....
</forms>
```

- component

Description : the type of widget you want to use in your form to interact with your variable

Mandatory : false

Possible values : text, textarea, select, checkbox, radiobox, wysiwyg, date, date-time

Default value : text

Example :

Write a form for an activity "validation" that use a variable "grant" with a checkbox.

```
<forms>
  <form>
    <activity>validation</activity>
    <variable name="grant" component="checkbox"/>
  </form>
  ....
</forms>
```

- editable

Description : specify if the variable is editable or not

Mandatory : true

Possible values : true, false

Default value : true

Example :

Write a form for an activity "validation" that use a variable "explanation" that should only be printed and not modified.

```
<forms>
  <form>
    <activity>validation</activity>
    <variable name="explanation" editable="false"/>
  </form>
  ....
</forms>
```

- mandatory

Description : specify if the variable must be filled or not

Mandatory : false

Possible value : true, false

Default value : false

Example :

Write a form for an activity "validation" that use a variable "amount" that must be filled.

```
<forms>
  <form>
    <activity>validation</activity>
    <variable name="amount" mandatory="true"/>
  </form>
  ....
</forms>
```

Childs : <validator/>

11.2.2.8

<validator/>

Description : add a validator for the data of the parent variable. If the validator failed, an error is show in the form.

Mandatory : false

Properties :

- name

Description : the name of the validator

Mandatory : true

Possible values : DateTime, EmailAddress, Expression, Number, NumberInRange, PositiveNumber, SpecialCharacter, StringLength, Float

Default value : none

Childs : <property/>

Example :

Write a form for activity "validation" with a variable "amount" that must be a Float and mandatory.

```
<forms>
  <form>
    <activity>validation</activity>
    <variable name="amount" mandatory="true">
      <validator name="Float"/>
    </variable>
  </form>
  ....
</forms>
```

11.2.2.9

<property/>

Description : define a property needed by a validator

Mandatory : false

Properties :

- name

Description : the name of the property

Mandatory : true

Possible values : none

Default value : none

- value

Description : the value of the property

Mandatory : true

Possible values : none

Default value : none

Childs : none

Example :

Write a form for activity "validation" with a variable "amount" that must be between 100 and 10000.

```

<forms>
  <form>
    <activity>validation</activity>
    <variable name="amount">
      <validator name="NumberInRange">
        <property name="min" value="100"/>
        <property name="max" value="10000"/>
      </validator>
    </variable>
  </form>
  ....
</forms>

```

11.2.3 Data Validators list

11.2.3.1 DateTime

Description : Validates that the data is a date

Properties : none

Example :

Write a form for an activity "schedule" with a variable meeting

```

<forms>
  <form>
    <activity>schedule</activity>
    <variable name="meetingDate" component="date-time">
      <validator name="DateTime"/>
    </variable>
  </form>
  ....
</forms>

```

11.2.3.2 EmailAddress

Description : Validates that the data is an email address

Properties : none

Example :

Write a form for an activity "signup" with a variable "email".

```

<forms>
  <form>
    <activity>signup</activity>
    <variable name="email" mandatory="true">
      <validator name="EmailAddress"/>
    </variable>
  </form>
  ....
</forms>

```

11.2.3.3

Expression

Description : Validates that the data matches one regular expression.

See <http://java.sun.com/j2se/1.5.0/docs/api/java/util/regex/Pattern.html#sum> for the regular expression format.

Properties :

- expression

Description : this is the regular expression that is conform to the format describe here <http://java.sun.com/j2se/1.5.0/docs/api/java/util/regex/Pattern.html#sum>

Mandatory : true

Example :

Write a form for an activity "signup" with a variable "email" validated with your own email pattern.

```
<forms>
  <form>
    <activity>signup</activity>
    <variable name="email" mandatory="true">
      <validator name="Expression">
        <property name="expression" value="^[A-
Z0-9._%+-]+@[A-Z0-9.-]+\.[A-Z]{2,6}$"/>
      </validator>
    </variable>
  </form>
  ....
</forms>
```

11.2.3.4

Number

Description : Validates that the data is a number (integer).

Properties : none

Example :

Write a form for activity "validation" with a variable "amount" that must be a number.

```
<forms>
  <form>
    <activity>validation</activity>
    <variable name="amount">
      <validator name="Number"/>
    </variable>
  </form>
  ....
</forms>
```

11.2.3.5

NumberInRange

Description : Validates that the data is a number in a specified range

Properties :

- min

Description : the minimum of the range

Mandatory : true

- max

Description : the maximum of the range

Mandatory : true

Example :

Write a form for activity "validation" with a variable "amount" that must be between 100 and 10000.

```
<forms>
  <form>
    <activity>validation</activity>
    <variable name="amount">
      <validator name="NumberInRange">
        <property name="min" value="100"/>
        <property name="max" value="10000"/>
      </validator>
    </variable>
  </form>
  ....
</forms>
```

11.2.3.6

PositiveNumber

Description : Validates that the data is a positive number

Properties : none

Example :

Write a form for activity "validation" with a variable "amount" that must be a positive number.

```
<forms>
  <form>
    <activity>validation</activity>
    <variable name="amount">
      <validator name="PositiveNumber"/>
    </variable>
  </form>
  ....
</forms>
```

11.2.3.7

SpecialCharacter

Description : Validates that the data only contains letters, digits, '-', '_' or space

Properties : none

Example :

Write a form for activity "validation" with a variable "id" that must not contain any special characters

```
<forms>
  <form>
    <activity>validation</activity>
    <variable name="id">
      <validator name="SpecialCharacter"/>
    </variable>
  </form>
  ....
</forms>
```

11.2.3.8

StringLength

Description : Validates that the data is a string with a length in a range

Properties :

- min

Description : the minimum of the range

Mandatory : false

Default value : 0

- max

Description : the maximum of the range

Mandatory : true

Example :

Write a form for activity "signup" with a variable "login" with a length between 4 and 15.

```
<forms>
  <form>
    <activity>signup</activity>
    <variable name="login">
      <validator name="StringLength">
        <property name="min" value="4"/>
        <property name="max" value="15"/>
      </validator>
    </variable>
  </form>
  ....
</forms>
```

11.2.3.9

Float

Description : Validates that the data is a float (ie: 100.45)

Properties : none

Example :

Write a form for activity "validation" with a variable "amount" that must be a Float.

```
<forms>
  <form>
    <activity>validation</activity>
    <variable name="amount">
      <validator name="Float"/>
    </variable>
  </form>
  ....
</forms>
```

11.3 Internationalize your forms

11.3.1 Overview

To internationalize a form, you need to provide a resource bundle (see **<resource-bundle/>**). The name of the resource bundle corresponds to the principal part of the name of internationalized property file.

Example: the resource bundle for the activity "validation" is "validation.i18n", then the corresponding files will be **validation.i18n.properties** or **validation.i18n_<locale>.properties** where locale is en for english, fr for french, es for spanish, ...

So if you want to internationalize you forms, you need to write a file by language and by activity and refer them in the **forms.xml** file by using **<resource-bundle/>** tag. These files must be included in the root directory of the BAR (Business Archive) file of your process.

11.3.2 Syntax

11.3.2.1 Overview

The syntax of the *.properties files are very simple, each line may contains a couple key/value like this : **key=value** .

To comment a line you need to start this line with **#**.

Example :

```
task-name=update the salary system
title=Update Salary

submit=Confirm update
cancel=Cancel this form

#variable title and label

initiator.label=Employee :
amount-granted.label=Amount to be added :
```

Use Case	Key
Task name	task-name
Form title	title
Submit button	submit
<Submitbutton/> button	buttonName. submit
Cancel button	cancel
Variable label	variableId. label
Checkbox value	variableId. checkbox
Radiobox values	variableId. radiobox-0 variableId. radiobox-1 ... variableId. radiobox-n
Select values	variableId. select-0.label variableId. select-0.value variableId. select-1.label variableId. select-1.value ... variableId. select-n.label variableId. select-n.value
