Site Map portlet

The site map portlets shows all the navigation tree in a single portlet.

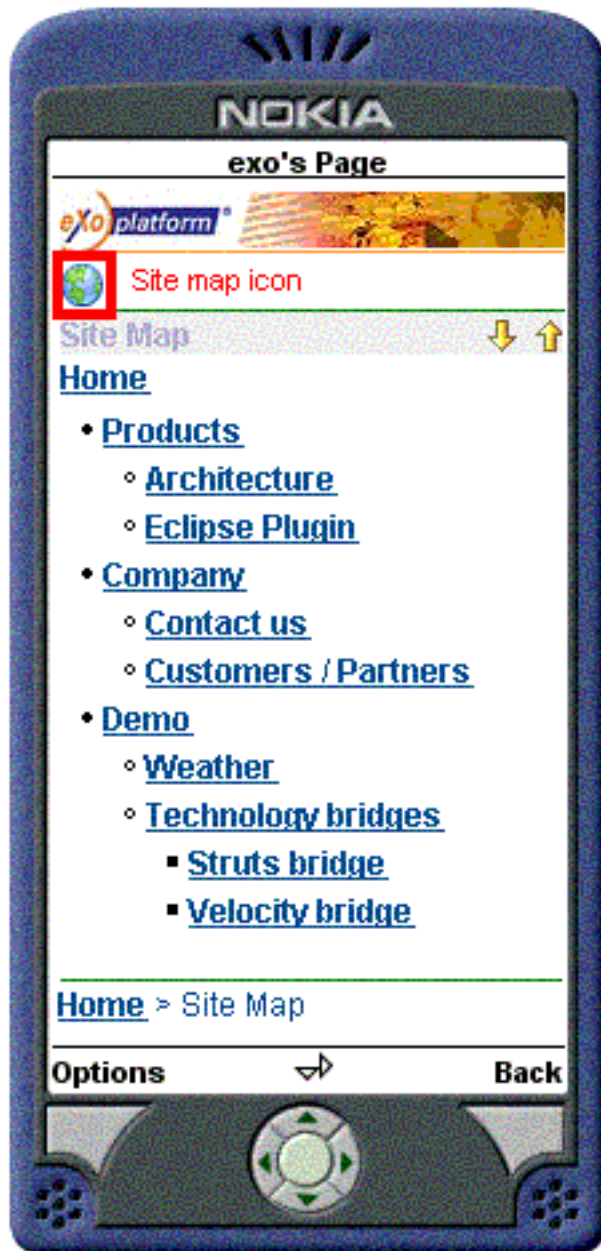

When clicking on one page link, it redirects you to the page binded to the clicked navigation node.

Normal browser

Mobile device

In mobile devices, the site map portlet is very importantas it allows the user to reach any navigation tree node in only two clicks. Our experience shows that with a GPRS connection type - which is still slow- this highly increase the navigation pleasure.
