Manage internationalisation resources

We advise you to first read that page [The properties file chain for an easier internationalisation management](#) which explains a very powerfull eXo Platform extension that allows to reference shared keys in the property files.

To reach the internationalisation (i18n) admin portlet just go to the admin home page and click on the icon highlighted in the next screenshot:

The i18n portlet goal is to allow the admin to modify, edit or add new property files. Indeed, the eXo Platform allows such a modification/creation as the properties are stored in a database backend and not in files as it is the case in the basic servlet/portlets.

That allows us to edit and modify those "files" inside a portlet.

The portlets prints all the available properties files and allows you to search for one or several (using some regular expression).

Internationalization ↓ ↑		
Name	Language	Action
locale.users.exo	zh	 
locale.users.exo	fr	 
locale.users.exo	en	 
locale.users.default	zh	 
locale.users.default	fr

 [New Resource](#)

You can either visualize or delete them using respectively the magnified glass icon or the cross icon in the right action column.

The next screenshot shows the view screen:
