

[DocV1.SMS](#)

The SMS portlet

The SMS portlet allows you to send SMS messages to a single user or to several.

The main form is shown in the next screenshot:

The screenshot shows a web form titled "Send SMS Message". It contains three input fields: "From", "Recipient", and "Message". The "Message" field is a large text area. Below the "Message" field, there is a small icon of a mobile phone and a "Send" button. To the right of the "Send" button is a "Clear" button. The form is enclosed in a light gray border with a yellow dashed line on the right side.

Sending SMS is not free and you will need to get an account with our partner PSWin. You can get the form from the help mode of the portlet as shown in the next screenshot. Don't worry it has nice prices.

Configure SMS Provider

PSWinCom
www.pswin.com

To configure the PSWinCom Provider you must have an account from PSWinCom! Please visit [PSWinCom](http://www.pswin.com) for more information.

Username:

Password:

You should then be able to send SMS...

Finally we provide a custom portlet mode called "monitor". It will display - like in the next screen - some usefull datas on the number of SMS messages that were sent, received...

The image shows a screenshot of a web application portlet titled "SMS Monitor". The portlet has a title bar with standard window controls (minimize, maximize, close) and a small icon on the right. Below the title bar, there is a table with four rows and two columns. The first column lists message status categories, and the second column shows the corresponding count, which is zero for all categories.

SMS Monitor	
Total number sent Messages	0
Successful Messages	0
Failed Messages	0
Erroneous Messages	0

Note that this portlet will be integrated to the message center portlet in the next eXo Platform versions.
