

# What's new in Telosys 1.1.2 ?

## 1/ XML converters

The java.sql.Date and java.sql.Time objects are now supported by XML converters

## 2/ Text file parsers

New classes are provided in the new package ( “telosys.util.file” ) for text files and CSV files parsing.

With these parsers it's now very easy to convert file's rows to collection of VO Beans, or any other kind of data.

## 3/ New DataSet

It's now possible to build DataSet based on text files ( pure text files or CSV files )
